

Data Center Security Experts

United Security & Communications, Inc. (USCI) delivers mission-critical electronic security systems purpose-built for data centers, cloud-adjacent facilities, and regulated environments throughout the Mid-Atlantic.

With decades of experience in high-security and operationally sensitive facilities, we design, deploy, and support security systems that reduce risk, integrate cleanly with mission-critical infrastructure, and remain reliable from Day One through operations.

We Understand Data Center Environments

Data centers demand more than standard commercial security.

Our teams are experienced in:

- ▶ Live data halls and phased white-space buildouts
- ▶ Redundant, fail-safe security architectures
- ▶ Coordination with power, cooling, network, and controls trades
- ▶ Audit- and compliance-ready documentation
- ▶ Secure operations beyond construction and turnover

How We Add Value

- ▶ Risk Reduction: Security designed to support uptime and operational continuity
- ▶ Compliance Readiness: Systems delivered with documentation and audit expectations in mind
- ▶ Constructability: Designs that install cleanly in active, mission-critical environments
- ▶ Repeatability: Standardized approaches suitable for multi-site and programmatic deployments

Mission-Critical Security Capabilities

Electronic Security Systems

- ▶ Multi-layered access control (perimeter to white space)
- ▶ High-availability video surveillance
- ▶ Visitor and contractor management
- ▶ Mobile and credential-based access solutions

High-Security & Regulated Facilities

- ▶ UL2050-certified and SCIF-capable installations
- ▶ Support for government, defense, and regulated workloads
- ▶ Standards-driven system design aligned with enterprise requirements

Operations & Lifecycle Support

- ▶ 24/7 monitoring
- ▶ Service and maintenance agreements
- ▶ Cloud-based and hybrid security platforms
- ▶ Expansion, retrofit, and refresh support

- ▶ We work comfortably in facilities where downtime, rework, or security gaps are not acceptable.

We Partner with:

- ▶ Data center owners and operators
- ▶ Owner's representatives and program managers
- ▶ Mission-critical consultants
- ▶ Construction managers, integrators, and commissioning teams

Our role is to be a trusted security partner—early in planning, reliable in execution, and accountable through operations.
